

# Angelos Zaros

Aspiring front-end developer with a solid foundation in HTML, CSS, and JavaScript. Currently focused on building projects with React.js while expanding my skills in Sass and Tailwind CSS, with basic exposure to testing frameworks like Jest and Cypress. Transitioning from a non-tech background with a solid understanding of Git and GitHub, and familiarity with Agile methodologies. I bring strong problem-solving skills, adaptability, and a quick learning aptitude to front-end development. Familiar with design-to-code workflows using Figma, I'm eager to contribute fresh perspectives to user-focused web applications. My communication and teamwork skills, honed through previous roles, equip me to thrive in collaborative environments.
